Barriers and Solutions for Climate Transparency in ALC

Centre for Climate Transparency

CENTRO DE TRANSPARENCIA CLIMÁTICA

Agustin Matteri
UN Environment

Climate Week
Montevideo, August 23st

Why is there a need for a Centre for Climate Transparency?

Paris 2015 → Cartagena 2016

The Enhanced Transparency Framework set forth on Article 13 of the Paris Agreement requires the systematization of the NDC's MRV systems and the LAC countries currently have common gaps in this front.

What is the Centre for Climate Transparency?

We are a team of interdisciplinary international climate experts based in Panama City that supports local teams to build capacities to meet their commitments on the ETF and provides them with the means to sustain them over time

Attributes:

- ✓ Hub of Climate Change Mitigation and Adaptation Experts
- ✓ 25 years of international experience
- ✓ Knowledge sharing
- ✓ Political and Technical Neutrality

National problems….

ETF: Systematic reporting requirements for evidence based policy making

1

- Lack of sustained training and technology tools for technical and political staff in the governments
- Staff turnover and no clear Long-Term Strategies
- Lack of data-driven policymaking

2

- Lack of climate change common language in public and private climate investment
- Reluctance of Ministries of Finance and Private investors
- Difficulties to increase ambition and to level adaptation finance

Regional solutions!

Supporting, implementing, and executing the following programs and initiatives at the national and regional levels

Basis of Work

Retention of Capacities

- Anti-turnover strategies
- Peer-to-peer exchange
- Leveraging capacities
- MRV systematization

Economies of Scale

- Efficient human and economic resources activity execution
- Partner with Frontrunner initiatives

“Platform of Platforms”

www.transparenciaclimatica.org

Mapa regional indicando “clusters” trabajados por país o en los que los países tienen interés de trabajar regionalmente

1. Populate platform with advancements divided by the identified clusters
2. Compare countries, identify champions, “revelations”, valuable efforts
3. Create common regional climate transparency languages
4. Long-Term Strategies and Regional Net Reductions
5. Facilitate the regionalization of technologies
